1. Permits, Change, Transfer, Renewal, Sale

Pending actions: No pending actions.

2. Signs and Markers

The mine ID signs are located at the contact points of the public road to the permit area and contains all of the appropriate information. All other signs and markers observed during the inspection were in compliance with the approved MRP.

4.b Hydrologic Balance: Sediment Ponds and Impoundments

Maintenance work has been performed on pond 009 and 006. Both ponds have had sediment removed from the interior of the pond which should bring them to approximately a 40% sediment level. Pond 006 and two sediment basins above 006 have been completely cleaned. The next sediment pond inspection should give the exact information on the ponds and their capacities.

7. Coal Mine Waste, Refuse Piles, Impoundments

Mining operations on top of the refuse pile are now taking place on the western side. The track hoe has been repaired and was actively excavating a lift during the inspection. The refuse pile appeared stable, with no visible hazards.

The culvert remnants located on the eastern surface of the refuse pile from the repairs done last year have been smashed and are scheduled to be removed.
